

EQUIPXP successfully structured and executed an international trade solution for the procurement and finance of a newly built FSIV (Fast Support Intervention Vessel) to a rapidly growing Nigerian Offshore Marine Services company.

This unique 40 meter FSIV was particularly suited and built for the aggressive West African conditions and will be christened as the third vessel within the customer's fleet.

EQUIPXP participated throughout all trade stages within this transaction and is proud to support the growth of another satisfied customer.
